
Course Instructor: **Nishat Tasnim**
Course: **CSE103 (Structured Programming)**

Lab: **10**

Topics Today

1. Pointers
2. Structures

Problem 1

Write a program to add two numbers using pointers. You must assign the address of the variables into a pointer variable.

Problem 2

Write a function that takes a pointer as parameter and increase its value by 1. Print the variable from the main function.

Problem 3

Write a function that takes two numbers as parameters and returns the multiplication of the numbers. The multiplication must be done using pointers. Print the value from the main.

Problem 4

Write a C program to swap two numbers using pointers and functions.

Problem 5

Write a C program to input elements in an array and print array using pointers.

Problem 6

Write a C program to find length of string using pointers.

Problem 7

Write a C program to search an element in array using pointers.

Problem 8

Create a structure called "Student" with members name, age, and total marks. Write a C program to input data for two students, display their information, and find the average of total marks.

Problem 9

Create a structure named Book to store book details like title, author, and price. Write a C program to input details for three books, find the most expensive and the lowest priced books, and display their information.

Problem 10

Design a structure named "Car" to store details like car ID, model, and rental rate per day. Write a C program to input data for three cars, calculate the total rental cost for a specified number of days, and display the results.
